# Functional Equations — problem 11.21

A. Engel — Problem-Solving Strategies · 1998

---

Find all functions $f$ defined on the set of positive real numbers which take positive real values and satisfy the conditions :

(i) $f[xf(y)] = yf(x)$ for all positive $x, y$ ;

(ii) $f(x) \to 0$ as $x \to \infty$ (IMO 1983).
