Games — problem 13.14

A. Engel — Problem-Solving Strategies · 1998

A and B take turns in placing a "+" sign or a "−" sign in front of one of the numbers in the sequence $1\ 2\ 3\ 4 \cdots 19\ 20$. After all 20 signs have been placed, B wins the absolute value of the sum. Find the best strategy for each player. How much does B win if both players use their best strategies ?
