Games — problem 13.31

A. Engel — Problem-Solving Strategies · 1998

A calls out a digit. Then B places that digit into one of the empty cells, until all 8 cells are filled by digits. A wants to maximize the difference. B tries to make it as small as possible. Prove that B can place the digits so that the difference is at most 4000. A can call digits such that the difference is at least 4000.
