An increasingly long path

Animath — Stage olympique de Sophia-Antipolis · 2006 · France

---

Let S be a finite set of $n \geq 3$ points in the plane. Assume that the distances between any two points are pairwise distinct, and colour red r segments whose endpoints are chosen among the points of S. Let m be the smallest integer greater than or equal to $\frac{2r}{n}$. Show that there is a path made of m red segments of increasing length.
