# Rational sextuple with two integers

Problèmes ouverts — A. Dujella · 2026

**Problem 3.1 (Dujella, 2026).** Is there any rational Diophantine sextuple with at least two integer elements ?

*Remark.* There are infinitely many rational Diophantine sextuples with at least one integer element. One such sextuple is $\{34440, 23001/280, 840/68921, 1121/11480, 19383/1640, 2530/287\}$ found by Piezas (2019).
