The Extremal Principle — problem 3.13

A. Engel — Problem-Solving Strategies · 1998

Every participant of a tournament plays with every other participant exactly once. No game is a draw. After the tounament, every player makes a list with the names of all players, who

(a) were beaten by him and (b) were beaten by the players beaten by him.

Prove that the list of some player contains the names of all other players.
