Enumerative Combinatorics — problem 5.29

A. Engel — Problem-Solving Strategies · 1998

Let $a_1, a_2, a_3 \ldots$ be the infinite sequence $1, 2, 2, 3, 3, 3, \ldots$, where k occurs k times. Find $a_n = f(n)$ in closed form. $\lfloor\ \rfloor$ and $\lceil\ \rceil$ are permitted.
