Death Row in Sikinia (6.166)

A. Engel — Problem-Solving Strategies · 1998

If you are condemned to die in Sikinia, you are put into Death Row until the last day of the year. Then all prisoners from Death Row are arranged in a circle and numbered $1, 2, \ldots, n$. Starting with #2 every second one is shot until only one remains who is immediately set free. How do you find the place of the sole survivor ?
