Transformation Geometry — problem 12.2.12

A. Engel — Problem-Solving Strategies · 1998

On the sides CA and CB of $\triangle ABC$, squares $CAMN$ and $CBPQ$ with centers O_1 and O_2 are constructed to the outside. The points D and F are the midpoints of the segments MP and NQ. Prove that the triangles ABD and O_1O_2F are rectangular and isosceles.
