

Rational sextuple with two integers

Problèmes ouverts — A. Dujella · 2026

Problem 3.1 (Dujella, 2026). Is there any rational Diophantine sextuple with at least two integer elements?

Remark. There are infinitely many rational Diophantine sextuples with at least one integer element. One such sextuple is $\{34440, 23001/280, 840/68921, 1121/11480, 19383/1640, 2530/287\}$ found by Piezas (2019).
