

# Finiteness of $n$ with at most two quadruples

Problèmes ouverts — A. Dujella · 2026

---

**Problem 5.2 (Dujella, 2026).** Is the set of all integers  $n$ ,  $n \not\equiv 2 \pmod{4}$ , for which there are at most two distinct  $D(n)$ -quadruples finite?
