

$D(n)$ -sextuple with odd elements

Problèmes ouverts — A. Dujella · 2026

Problem 5.11 (Dujella, 2026). Is there any non-zero integer n and a $D(n)$ -sextuple with all odd elements?

Remark. Petričević (2018) found examples of $D(n)$ -quintuples with all odd elements : $\{-273375, -361375, -504375, -591375, -679375\}$ is a $D(831406275)$ -quintuple and $\{-9, 59, 6075, 47291, 555579\}$ is a $D(5117175)$ -quintuple.
