D(n)-sextuple with odd elements

Problèmes ouverts — A. Dujella · 2026

Problem 5.11 (Dujella, 2026). Is there any non-zero integer n and a $D(n)$-sextuple with all odd elements ?

Remark. Petričević (2018) found examples of $D(n)$-quintuples with all odd elements : $\{-273375, -361375, -50$ is a $D(831406275)$-quintuple and $\{-9, 59, 6075, 47291, 555579\}$ is a $D(5117175)$-quintuple.
