Conway's soldiers (1.40)

A. Engel — Problem-Solving Strategies · 1998

In any way you please, fill up the lattice points below or on the x-axis by chips. By solitaire jumps try to get one chip to $(0, 5)$ with all other chips cleared off. (J. H. Conway.) The preceding problem of Kontsevich might have been suggested by this problem.

A solitaire jump is a horizontal or vertical jump of any chip over its neighbor to a free point with the chip jumped over removed. For instance, with (x, y) and $(x, y + 1)$ occupied and $(x, y + 2)$ free, a jump consists in removing the two chips on (x, y) and $(x, y + 1)$ and placing a chip onto $(x, y + 2)$.
