Number Theory — problem 6.154

A. Engel — Problem-Solving Strategies · 1998

Let $P(n)$ be the product of all digits of a positive integer n. Can the sequence n_k defined by $n_{k+1} = n_k + P(n_k)$ and initial term $n_1 \in \mathbb{N}$ be unbounded for some n_1 (AUO 1980).
