Sequences — problem 9.51

A. Engel — Problem-Solving Strategies · 1998

Start with two positive integers x_1, x_2, both less than 10000, and for $k \geq 3$ let x_k be the smallest of the absolute values of the pairwise differences of the preceding terms. Prove that we always have $x_{21} = 0$ (AUO 1976).
