Polynomials — problem 10.26

A. Engel — Problem-Solving Strategies · 1998

Let a, b, c be distinct numbers. The quadratic equation

$$\frac{(x-a)(x-b)}{(c-a)(c-b)} + \frac{(x-b)(x-c)}{(a-b)(a-c)} + \frac{(x-c)(x-a)}{(b-c)(b-a)} = 1$$

has the solutions $x_1 = a$, $x_2 = b$, $x_3 = c$. What follows from this fact ?
