Functional Equations — problem 11.24

A. Engel — Problem-Solving Strategies · 1998

Find all functions $f : \mathbb{R} \mapsto \mathbb{R}$ such that

$$f\left[x^2 + f(y)\right] = y + [f(x)]^2 \quad \text{for all } x, y \in \mathbb{R} \qquad \text{(IMO 1992)}.$$
