Harder Geometrical Problems — problem 12.3.2.14

A. Engel — Problem-Solving Strategies · 1998

A finite set S of points in the plane has the property that if, for any two of its points A, B, there is an isometry f such that $f(A) = B$, then also $f(S) = S$. Show that all points of S lie on a circle. Is this also valid if S is infinite ?
