Harder Geometrical Problems — problem 12.3.2.43

A. Engel — Problem-Solving Strategies · 1998

A mathematician got lost in the woods in the shape of a half plane. All he knows is that he is exactly one mile from the edge of the woods. Show that he can get out of the woods by walking not more than 6.4 miles. Experiment with some paths, and test them versus the nearly ideal 6.4 miles.
