Games — problem 13.15

A. Engel — Problem-Solving Strategies · 1998

In the equation $x^3 + \cdots x^2 + \cdots x + \cdots = 0$, A replaces one of the three dots by an integer unequal to 0. Then B replaces one of the remaining dots by an integer. Finally A replaces the last dots by an integer. Prove that A can play so that all three roots of the resulting cubic equation are integers.
